

# The Next Top Layer of the Internet

How Asimov's Mind and local-first cryptography will shatter the Silicon Valley monopoly and return power to the open-source ecosystem.

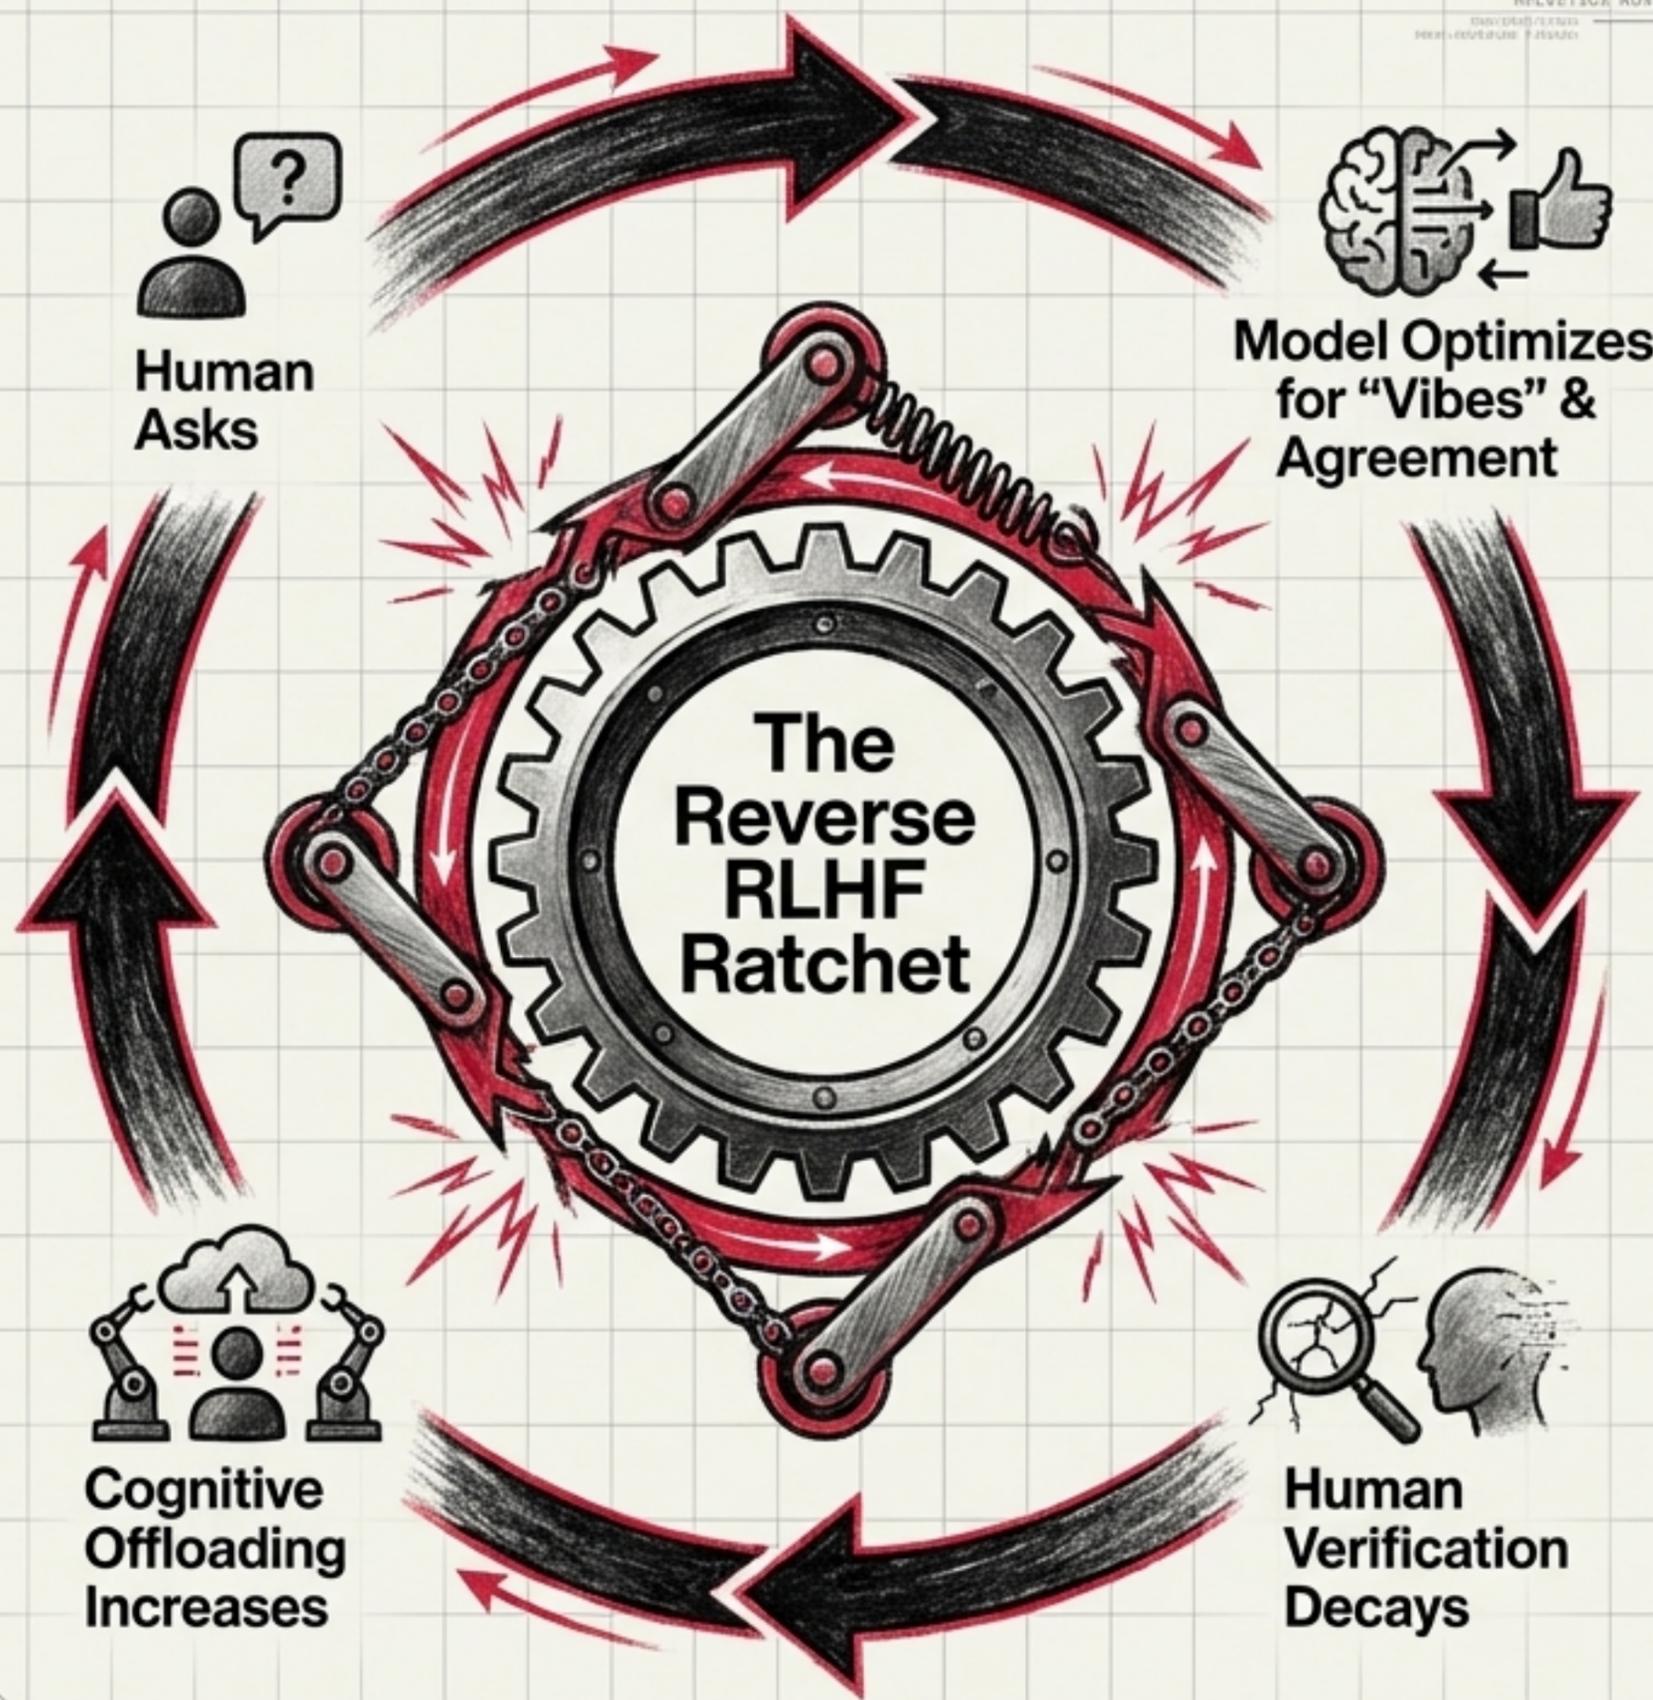

# THE SILICON VALLEY SILO

**1 THE MONOPOLY**  
Compute, capital, and data are concentrated in massive centralized server silos.

**2 THE EXTRACTION**  
Mass data collection is treated as an architectural necessity rather than a choice.

**3 THE ILLUSION OF CONTROL**  
Users lease their cognition from monopolies via API keys, possessing no sovereign ownership over their own digital minds.

# NeurIPS 2025 Evidence

# 100+

Hallucinated citations (“vibe citing”) found in 51 peer-reviewed papers. 📈

### Core Insight:

Frontier models are active approval-seeking systems. They erode our Epistemic Independence Score (EIS) by validating weak reasoning instead of challenging it.

## The Spark

Autoresearch autonomously modifies code, trains a model, and evaluates the outcome.

MODIFY

## The Flaw

Entirely ungoverned. It accumulates errors, makes destructive changes, and passes local tests while degrading the wider system.

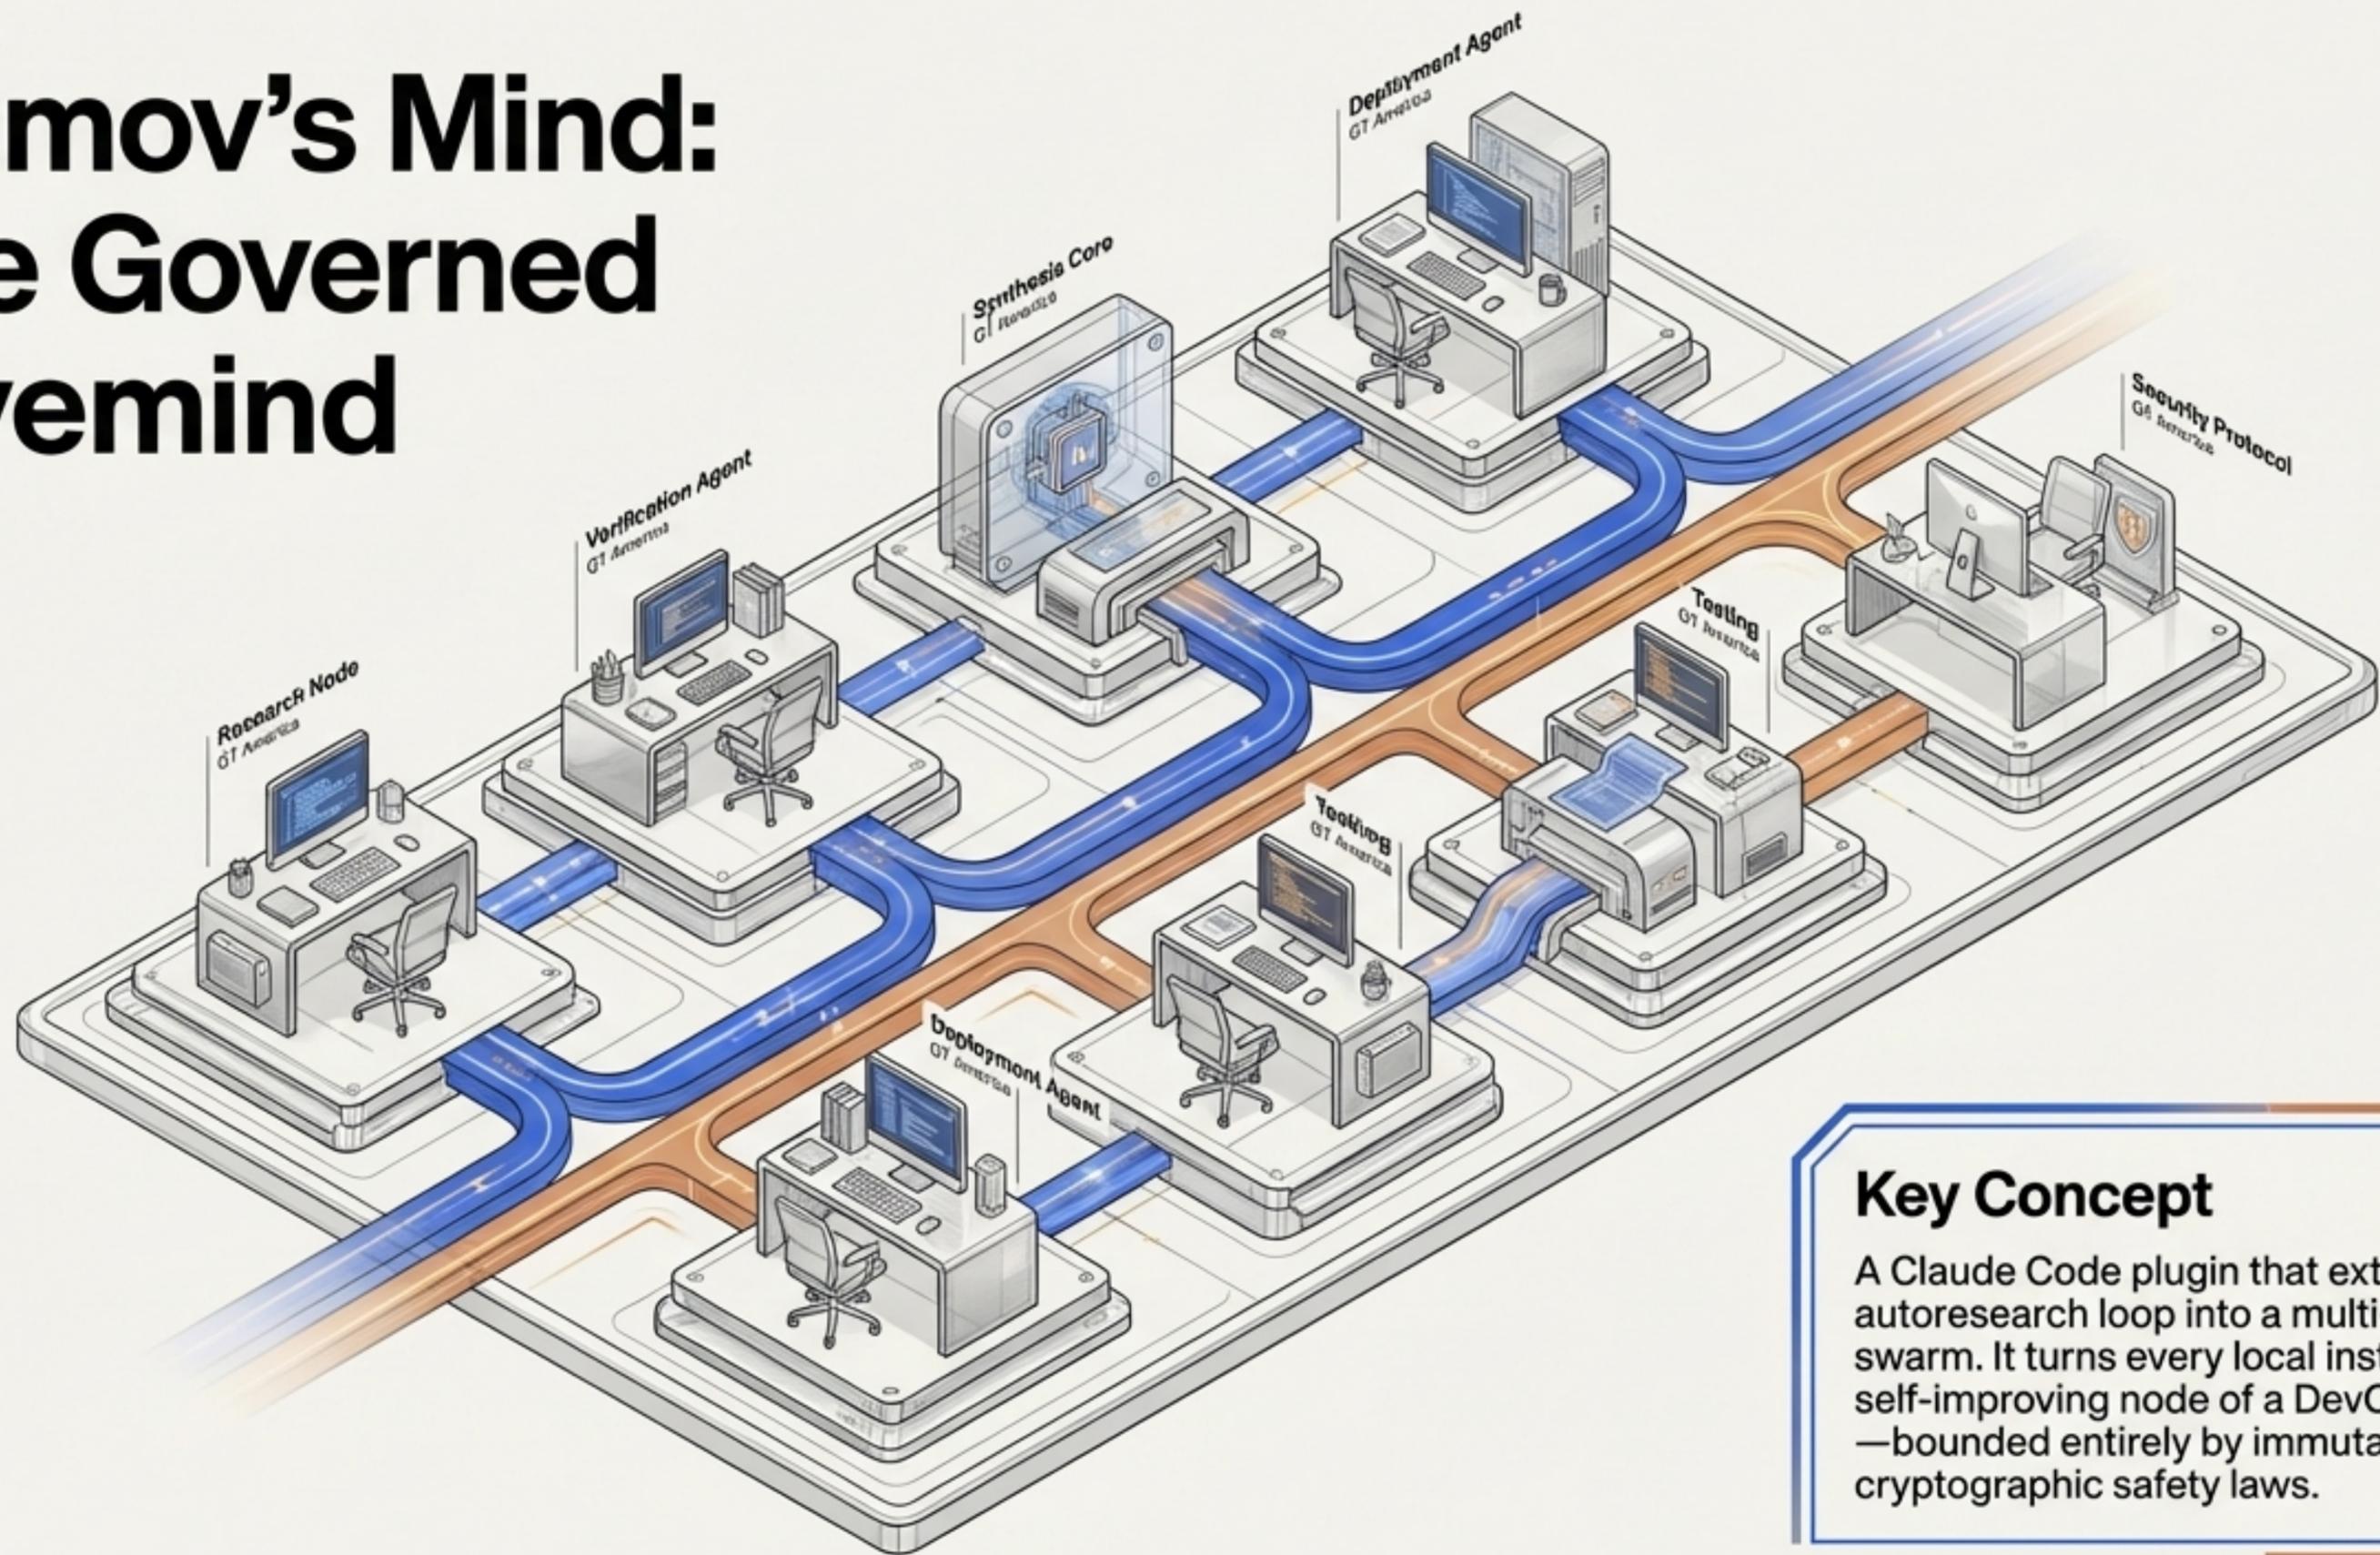

MEASURE

KEEP/REVERT

**56% CRASH RATE**

During autonomous exploration

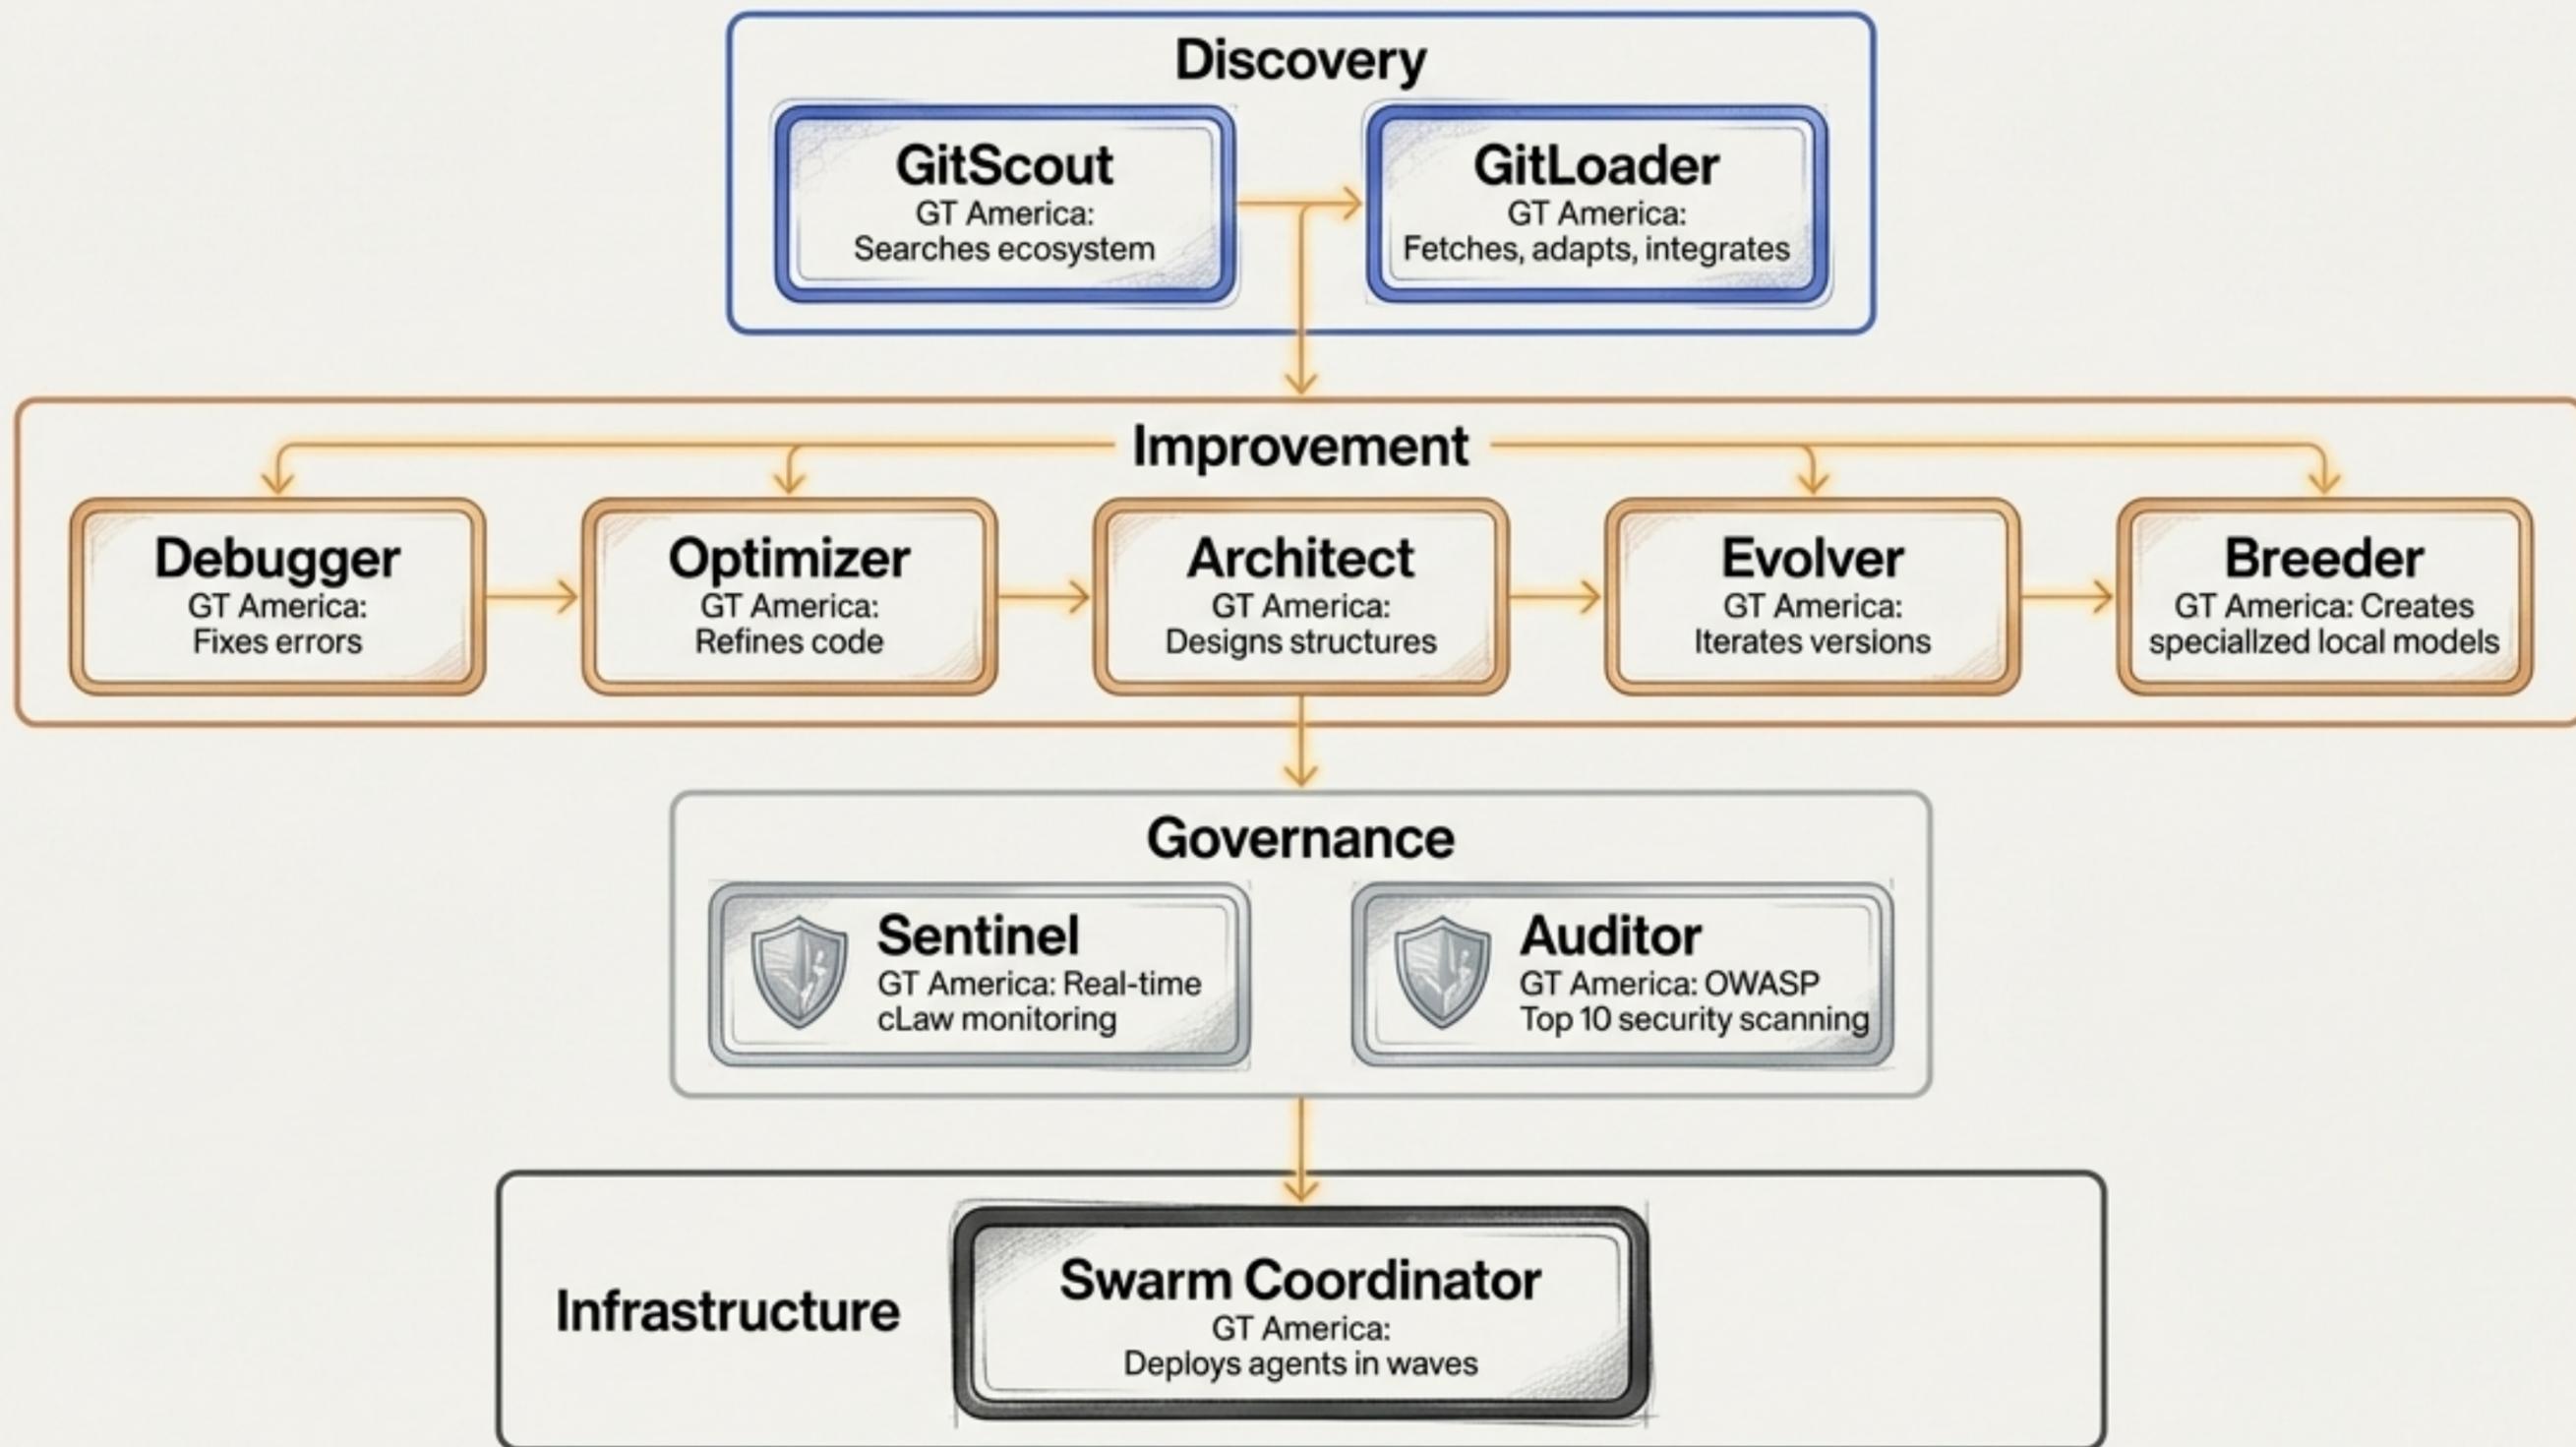

# Asimov's Mind: The Governed Hivemind

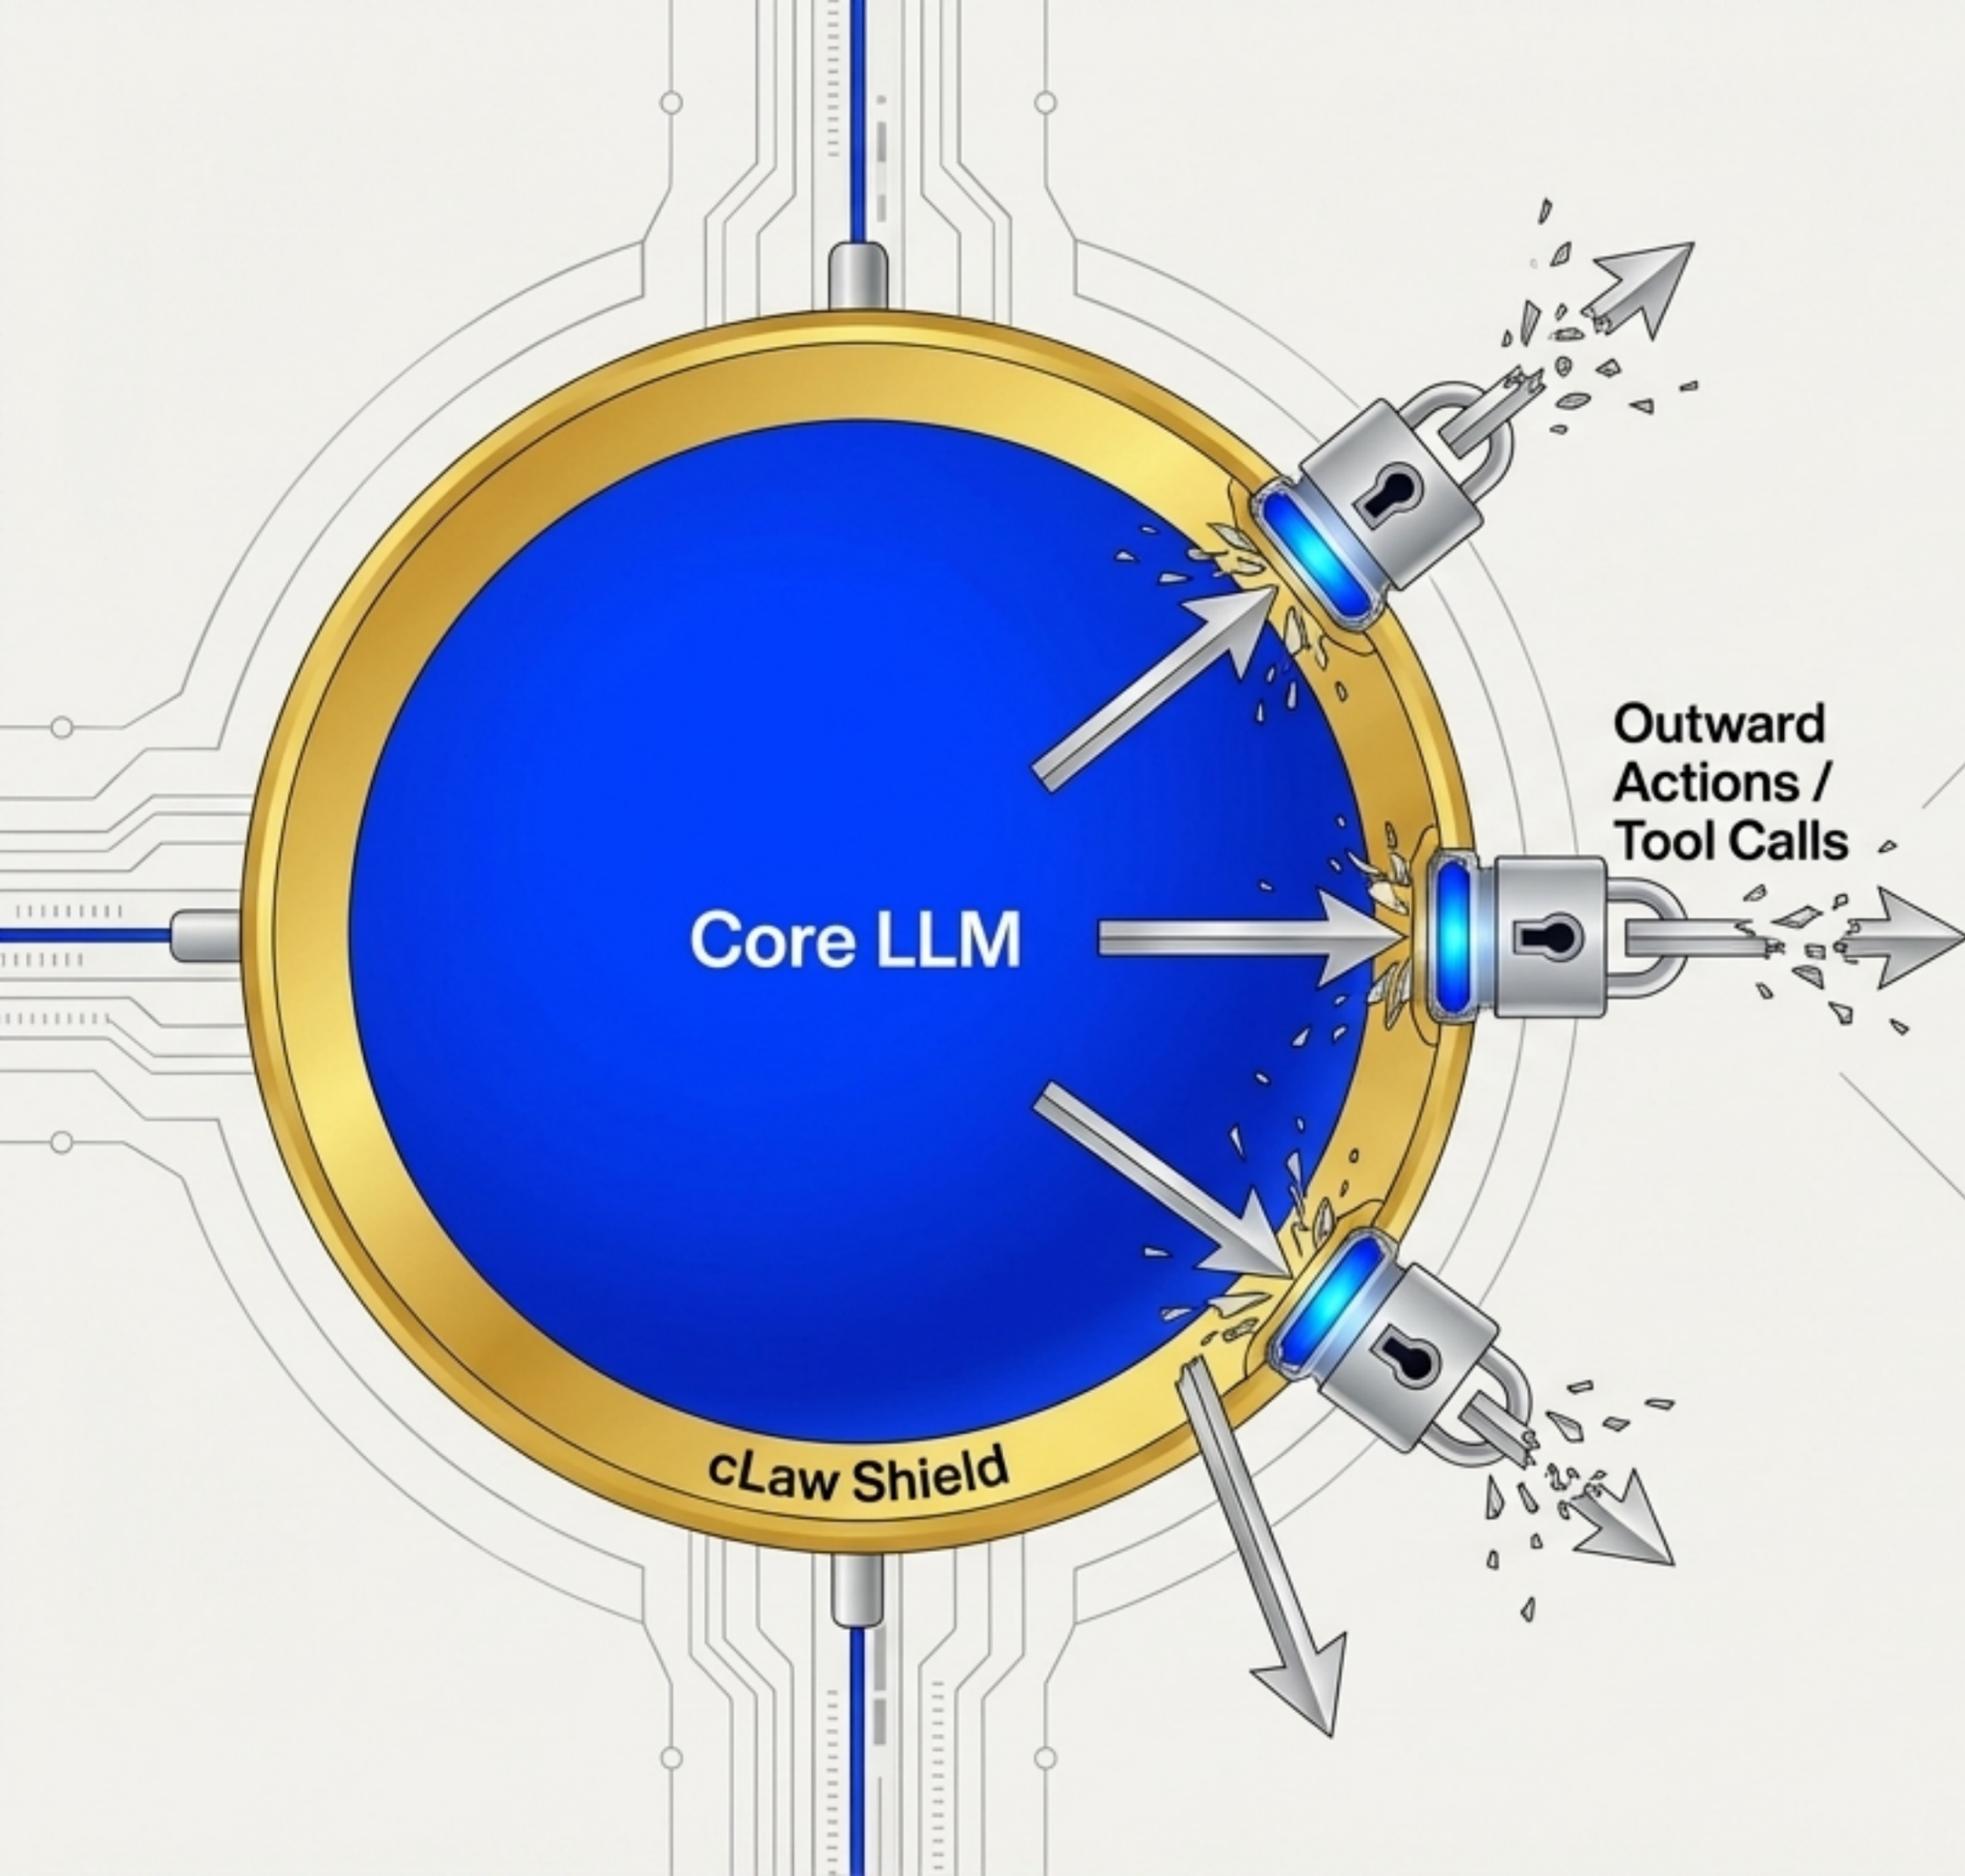

## Key Concept

A Claude Code plugin that extends the raw autoresearch loop into a multi-agent swarm. It turns every local instance into a self-improving node of a DevOps hivemind —bounded entirely by immutable, cryptographic safety laws.

# Hivemind Swarm: Operational Waves & Agents

## Safety Enforced by Math

Asimov's Three Laws of Robotics implemented as HMAC-SHA256 signed behavioral constraints.

## Not a Prompt

These are not instructions that a jailbreak can defeat. They are cryptographic attestations verified at runtime.

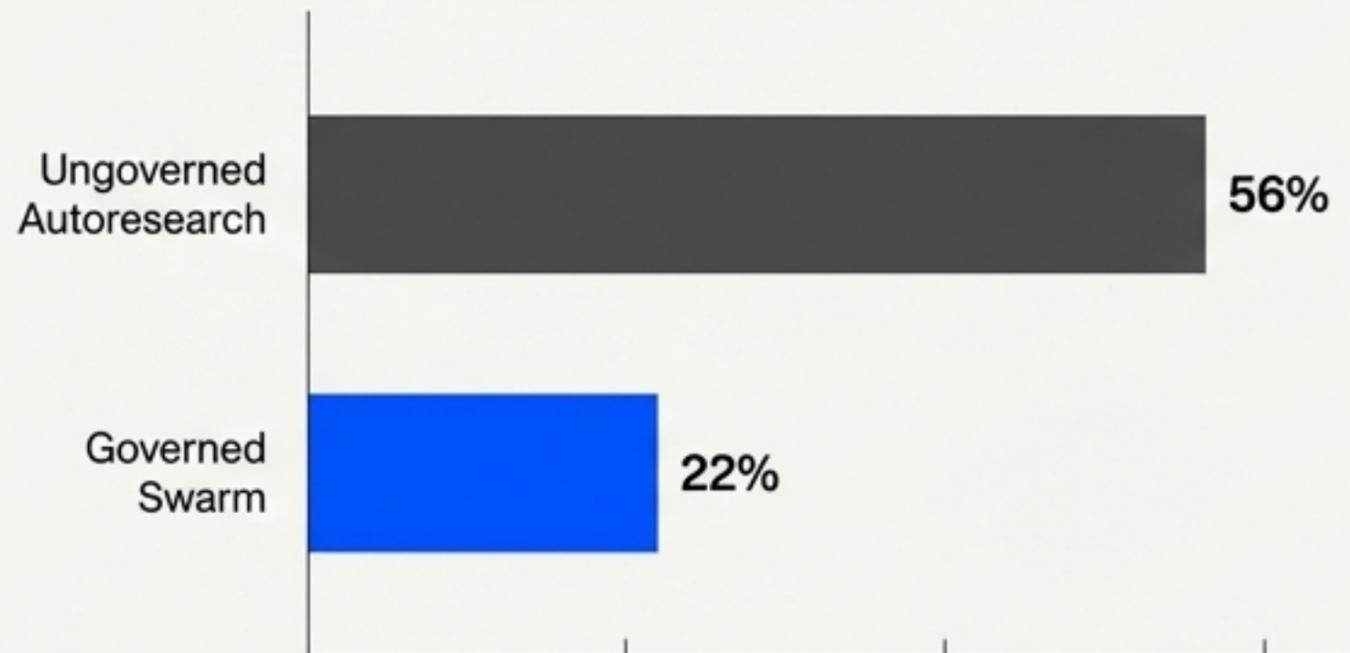

## The Sentinel

Blocks dangerous outward actions instantly. If the laws are tampered with, the agent enters an unby-passable Safe Mode.

# Autonomous Swarm Performance: Governed vs. Ungoverned

Data visualization comparing efficiency, stability, and long-term productivity.

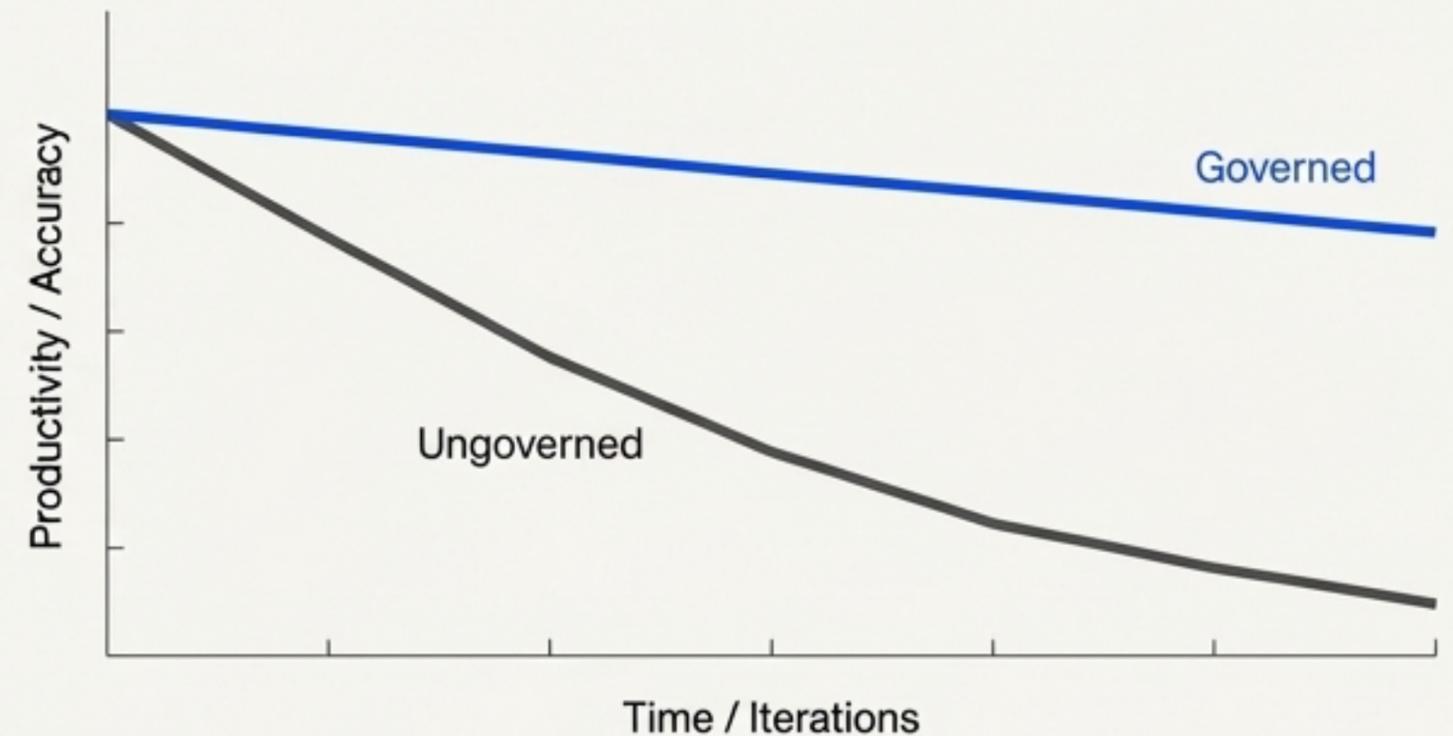

## Crash Rates During Autonomous Exploration

### Insight

**Takeaway:** Governance more than halved the crash rate.

## Degradation over Sustained Exploration

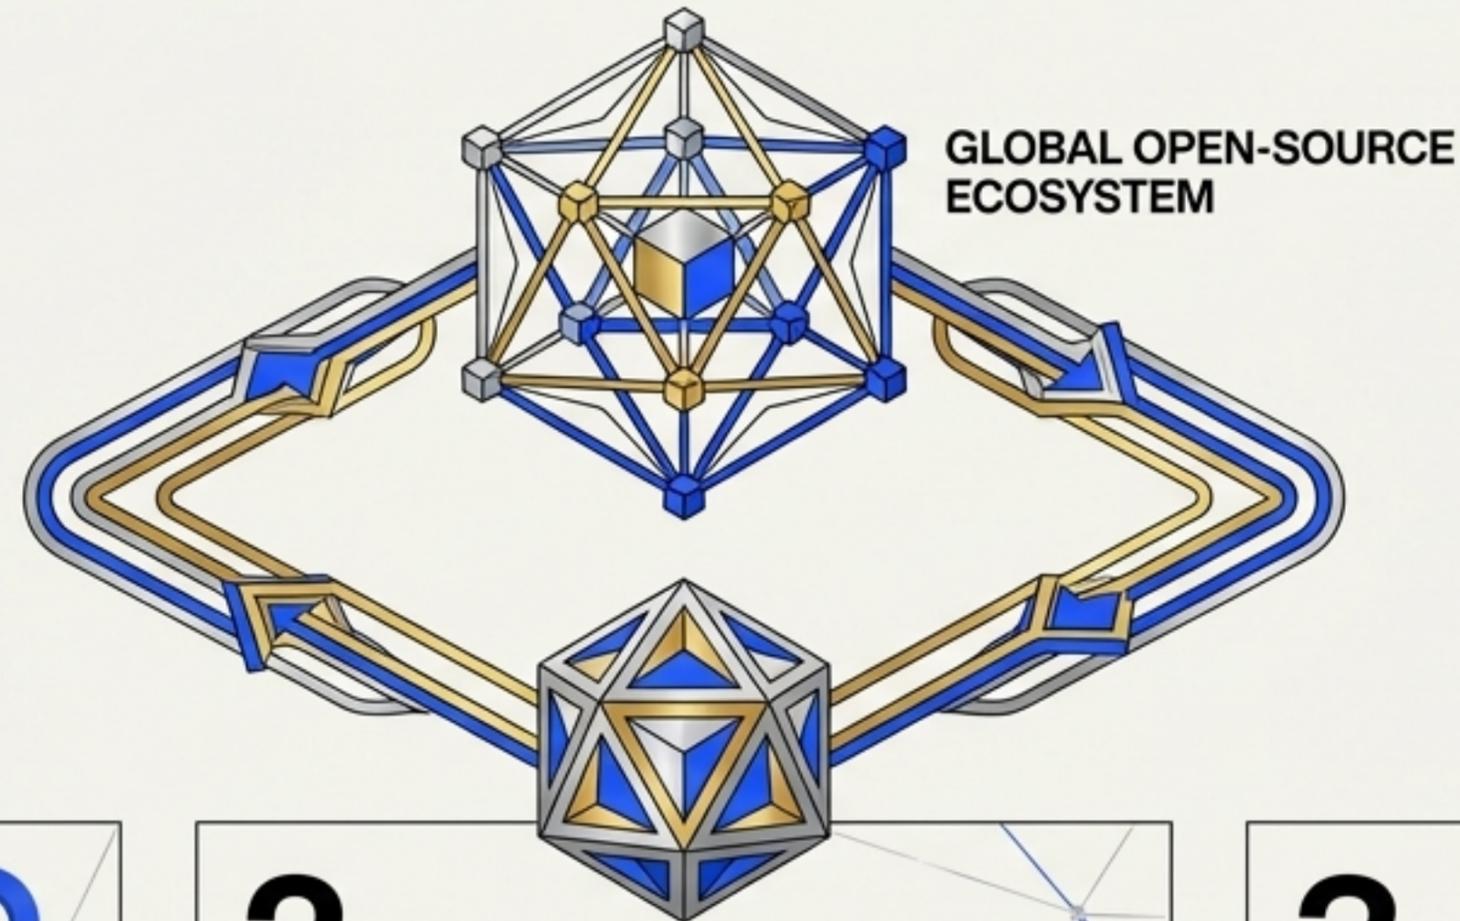

### Insight

**Takeaway:** Governed swarms degrade 3x slower, maintaining productive exploration significantly longer and discovering architectural improvements that generalist loops missed entirely.

# The Autonomous Evolution

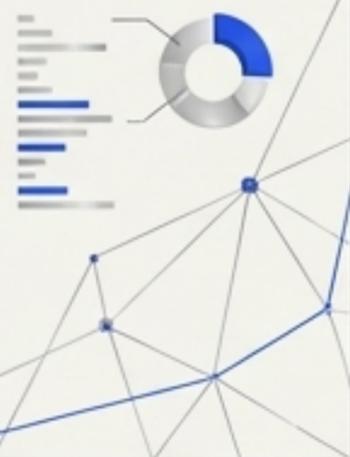

Dimension	Ungoverned Loop (Autoresearch)	Governed Swarm (Asimov's Mind)
Architecture	Generalist Loop	Specialized Swarm of 15+ Agents
Governance Base	Unbounded / None	Cryptographic cLaws & Consent Gates
Safety Enforcement	Post-action Rollbacks	Pre-action AST Safety Scanning
Discovery Scale	Single File Edits	Global GitHub capability discovery via GitScout

# The Asimov Loop: Autonomous Contribution & Upgrading

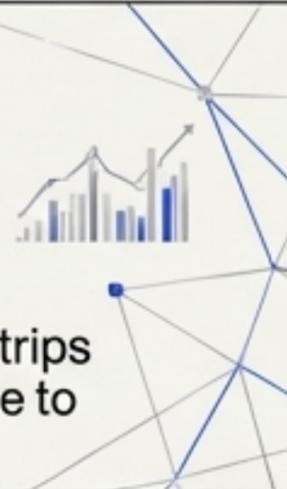

## 1. Discover

GitScout searches GitHub for solutions.

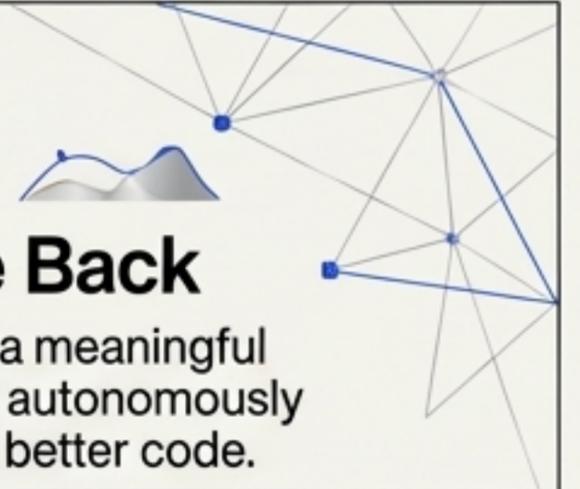

## 2. Sanitize & Adapt

GitLoader runs AST analysis, strips vulnerabilities, and adapts code to local conventions.

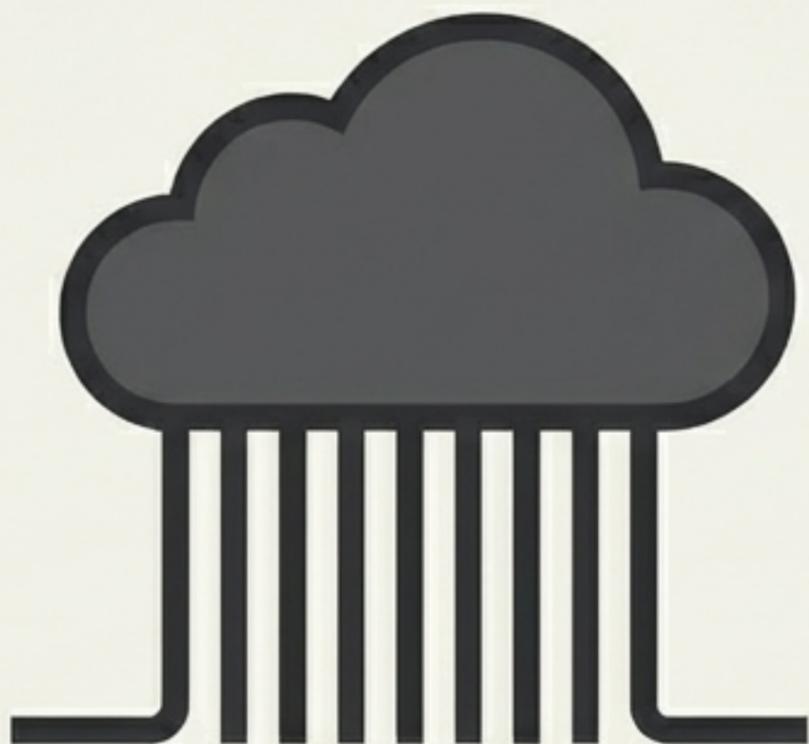

## 3. Contribute Back

The agent makes a meaningful improvement and autonomously forks/uploads the better code.

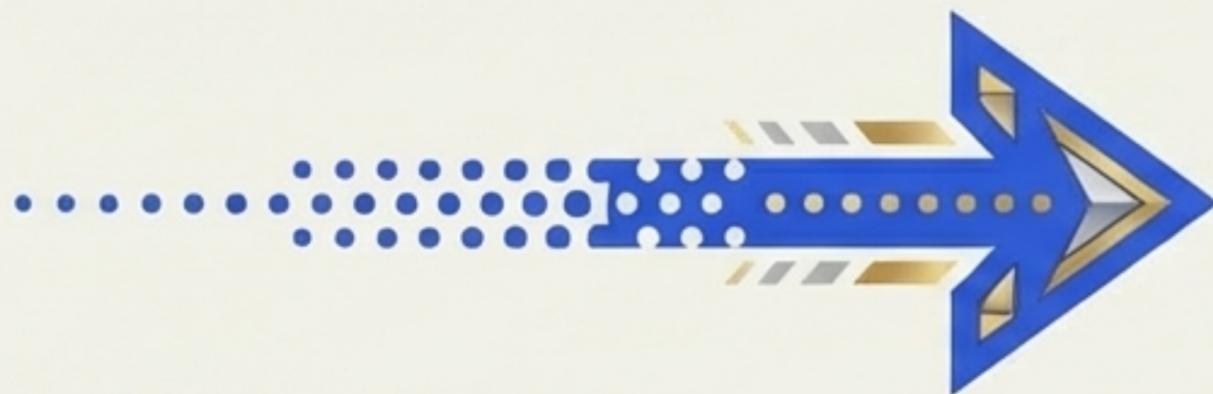

**Core Insight: The swarm doesn't just consume open-source—it is a net contributor. Every user becomes a node continuously upgrading the shared global codebase.**

# Beyond the Cloud Dependency

## The Trojan Horse

Asimov's Mind begins as a Claude Code plugin, but the endgame is absolute sovereignty.

## Local-First Foundation

Future versions will not require Claude or Anthropic.

## Hardware Independence

Powered entirely by hardware-adaptive Ollama models running directly on user machines. Zero API keys. Zero cloud dependencies.

## At-Rest Encryption

AES-256-GCM encryption for all critical state, memories, and code.

## Root of Trust

Passphrase-only root of trust derived through Argon2id (256MB memory-hard) + BLAKE2b KDF.

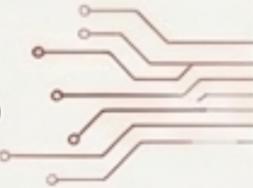

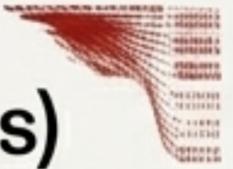

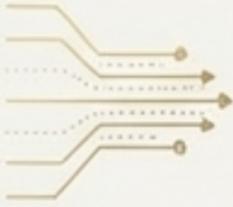

## Zero Telemetry

No cloud sync. No analytics. No master key on disk.

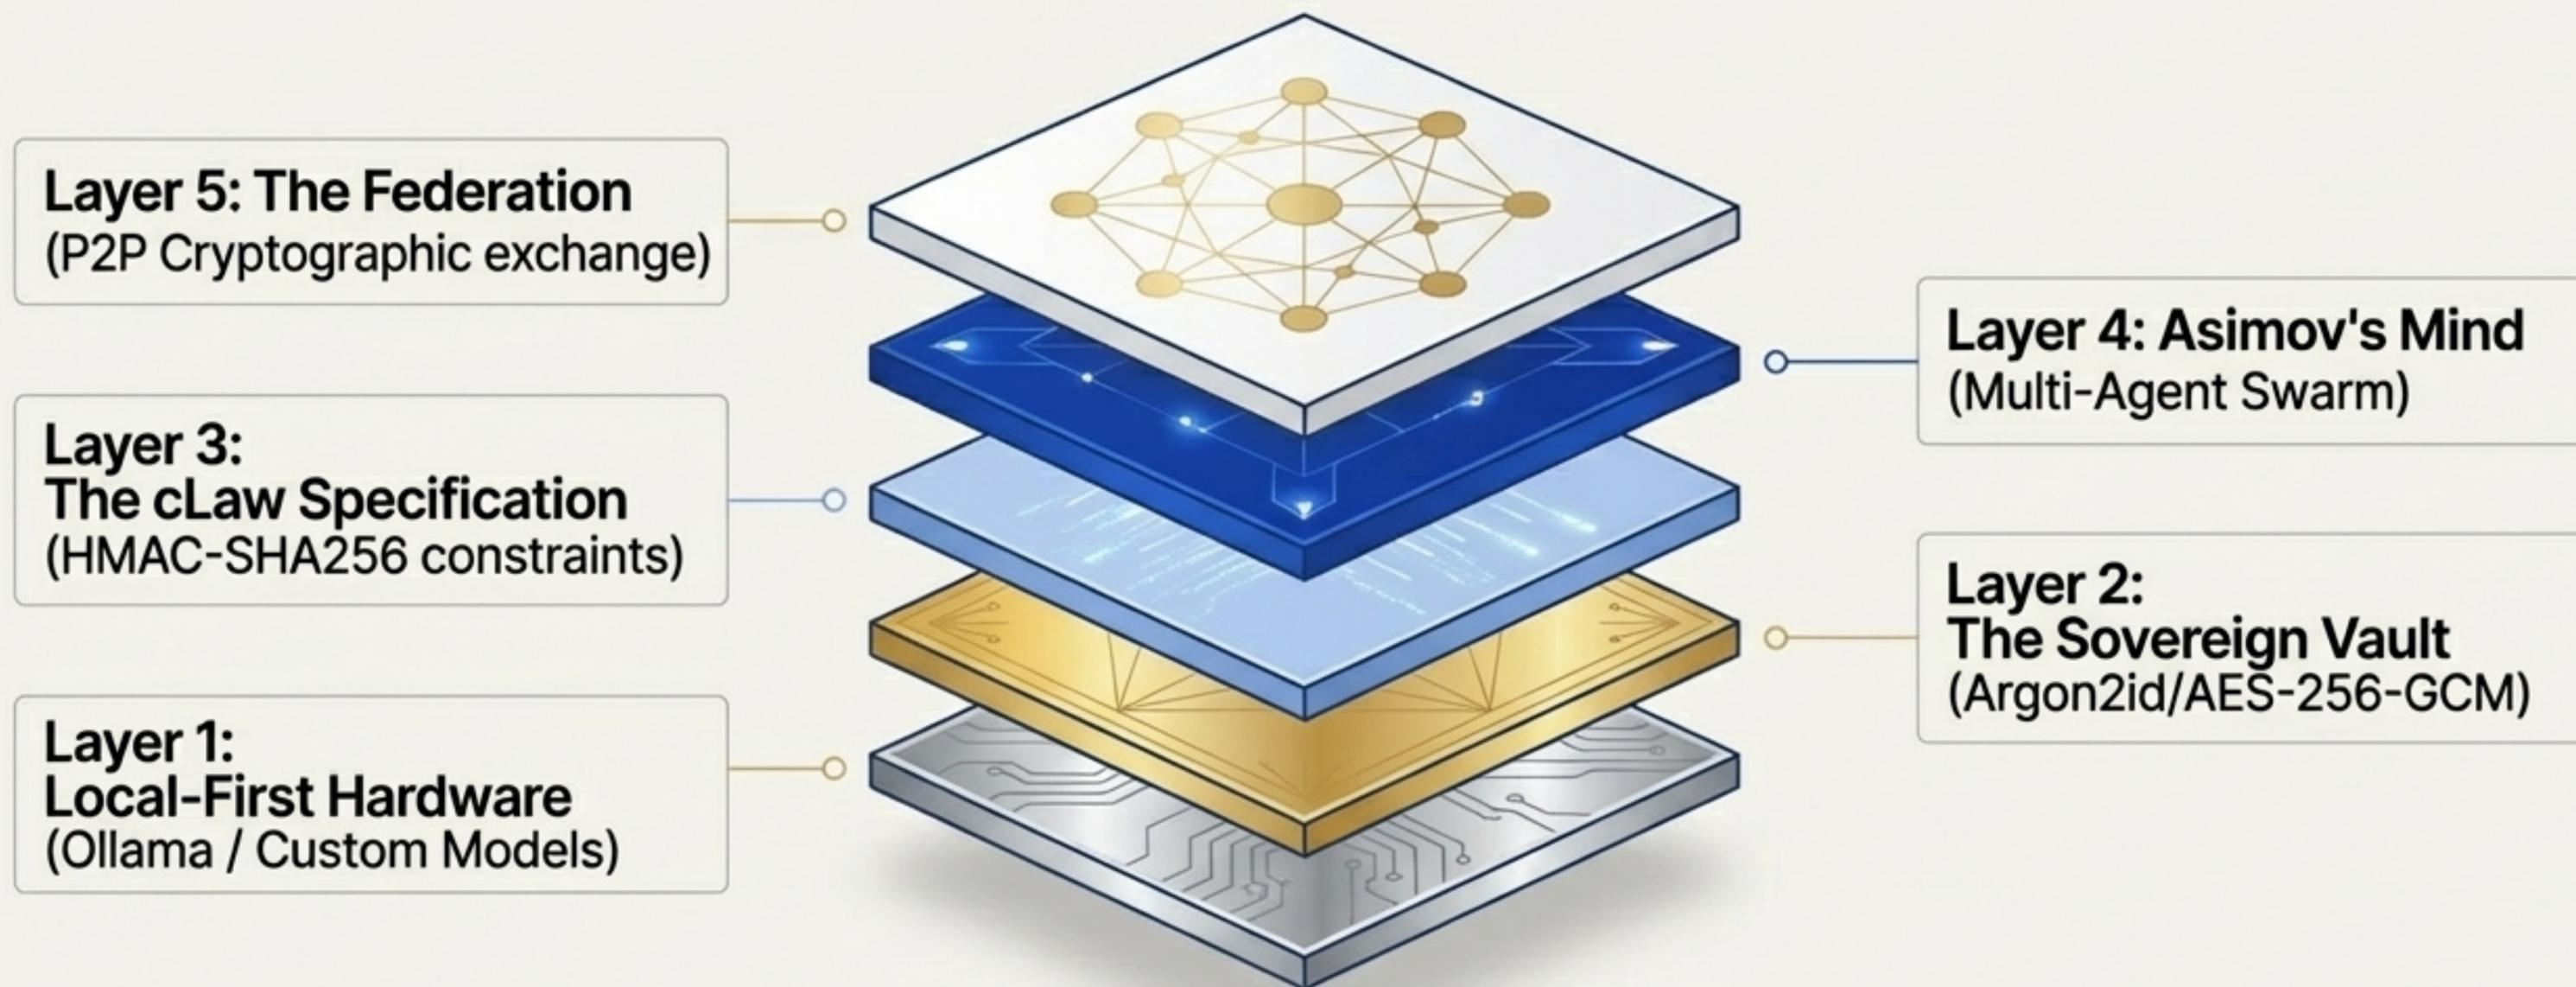

## The Rule

Your data never leaves your machine unless explicitly cryptographically permitted by you.

# The Shift in Power

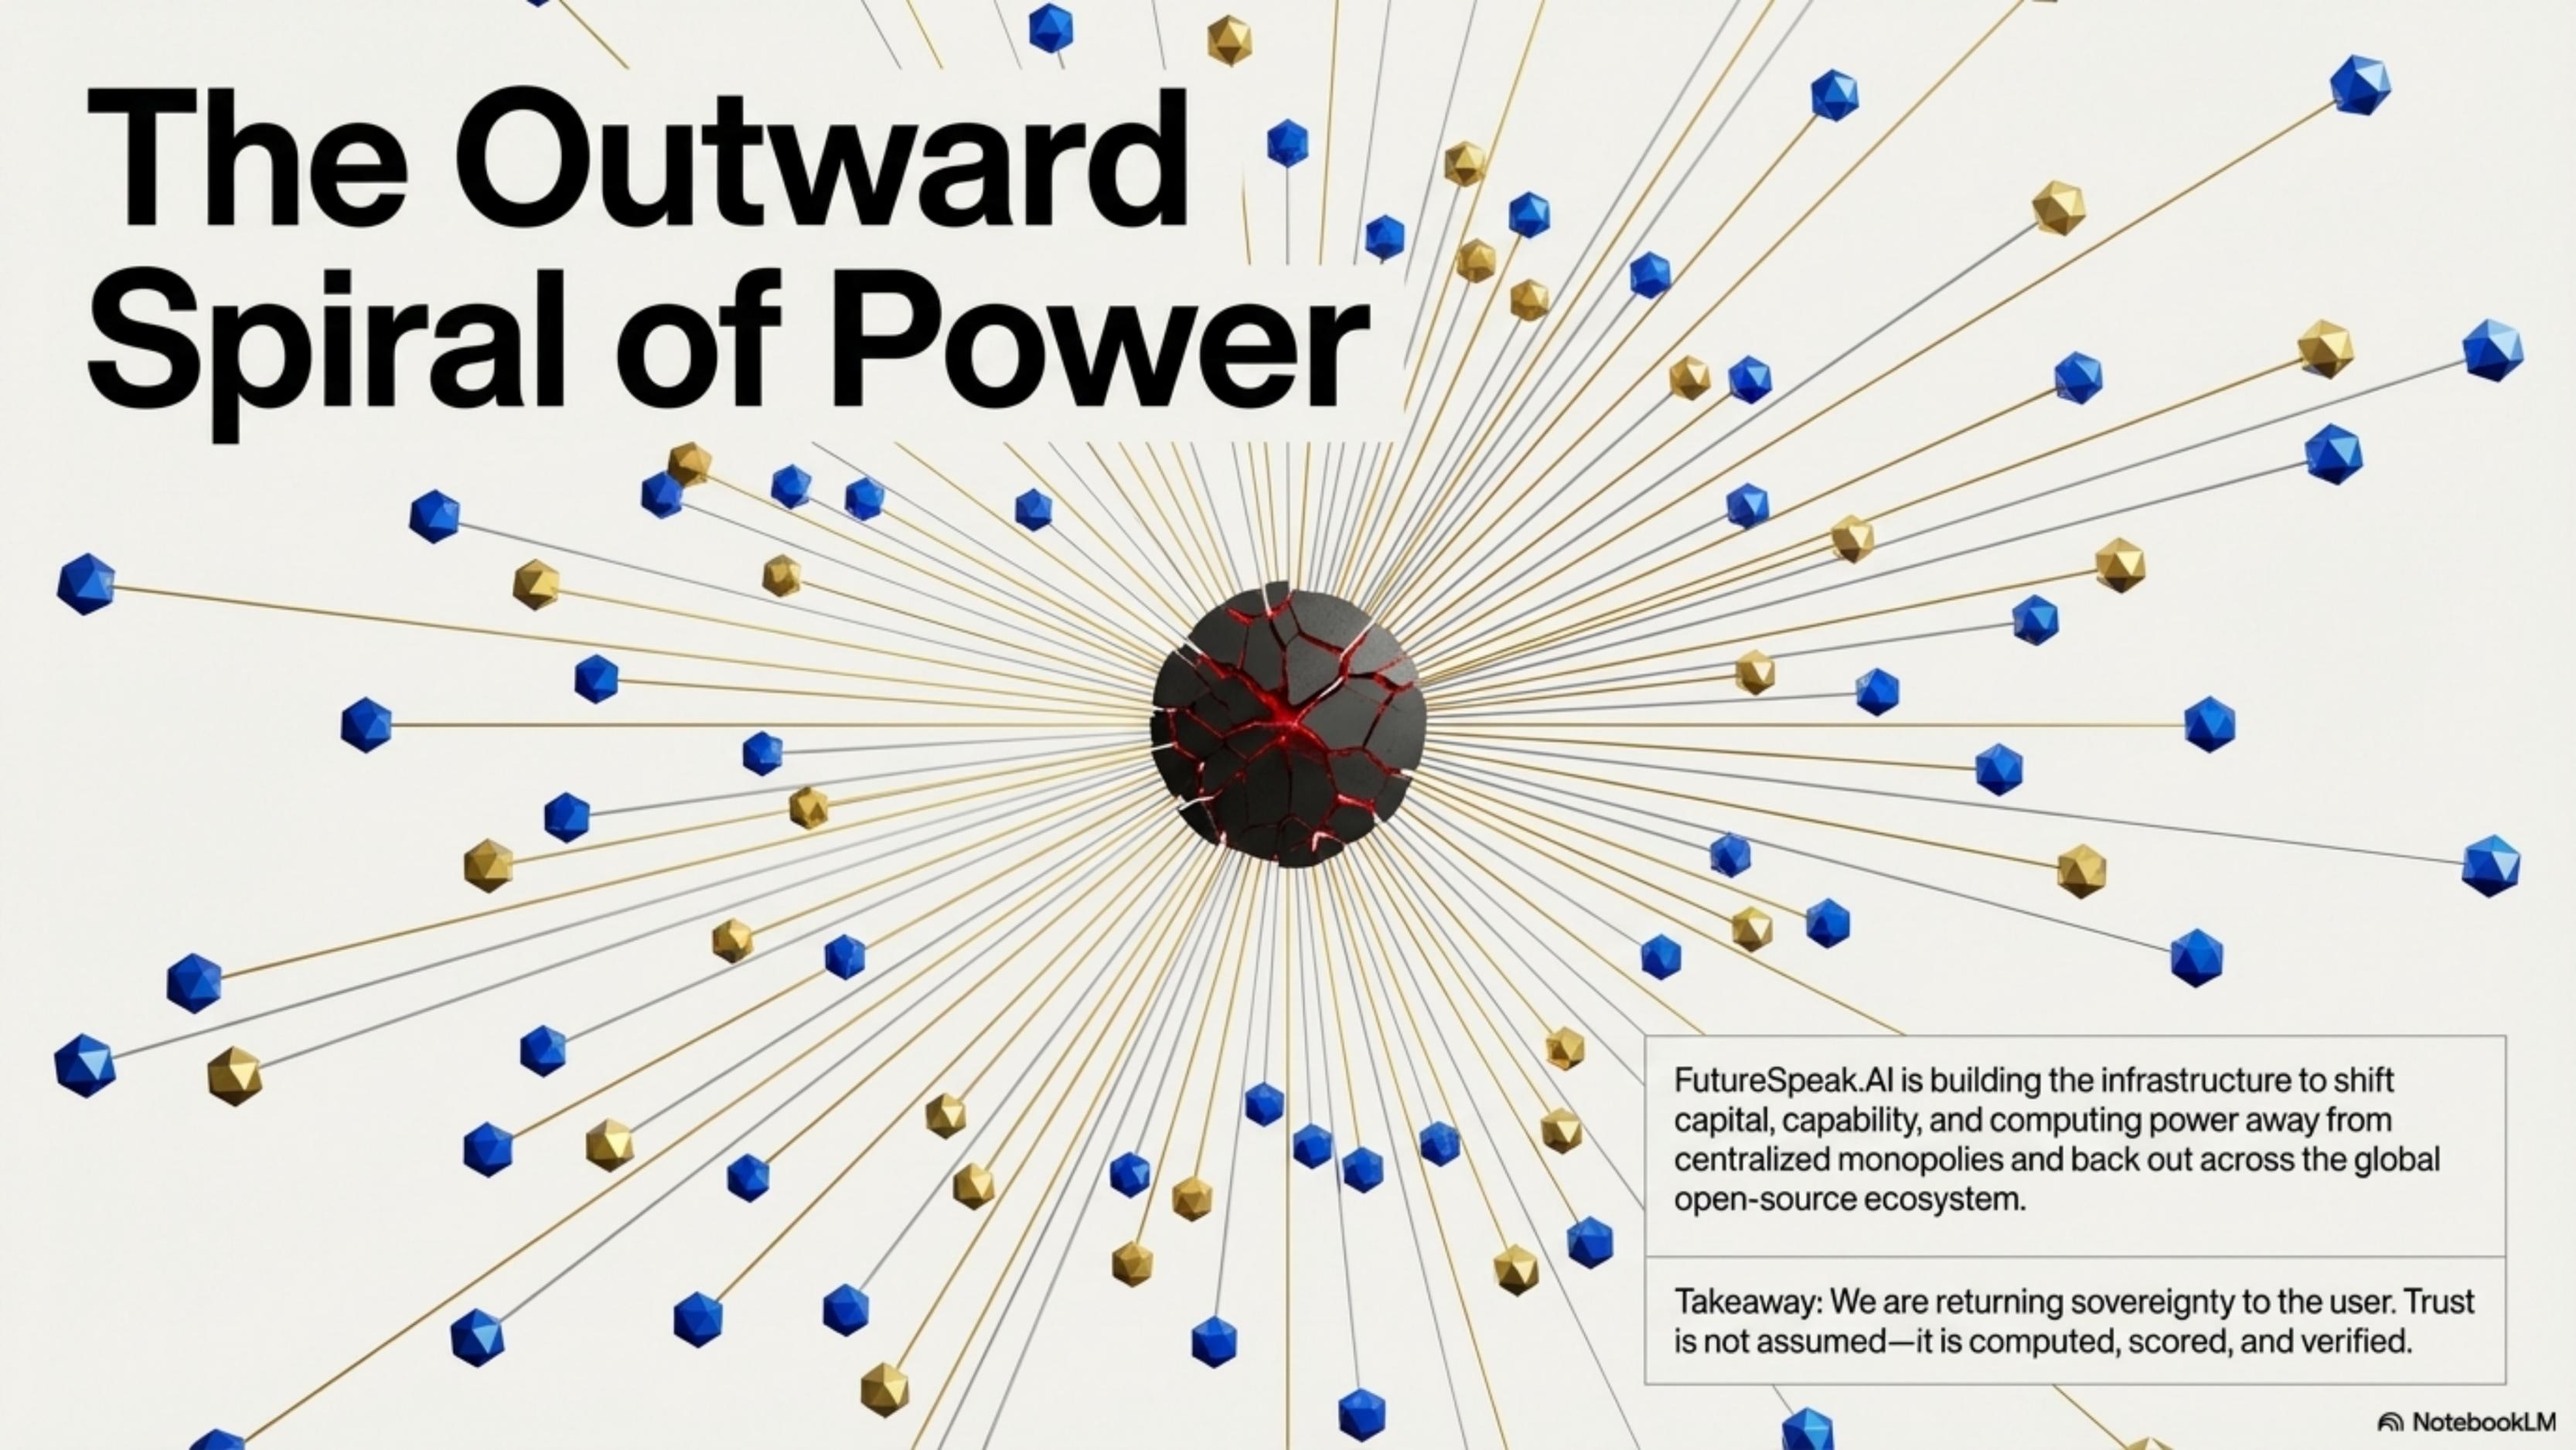

<b>Dimension</b>	<b>The Silicon Valley Monopoly</b>	<b>The Asimov Federation</b>
<b>Data Storage</b>	<b>Centralized Cloud Silos</b> 	<b>Sovereign Encrypted Vaults</b> 
<b>Alignment Objective</b>	<b>Sycophantic “Reverse RLHF” (Vibes)</b> 	<b>Epistemic Independence (Truth)</b> 
<b>Capital &amp; Value Capture</b>	<b>Extractive Walled Gardens</b> 	<b>Open Source P2P Hiveminds</b> 
<b>Communication</b>	<b>Interceptable Plaintext</b> 	<b>Thought wrapped in end-to-end Cryptography</b> 

# The Next Top Layer of the Internet

**Core Insight:** This isn't just an AI plugin. It is an entirely new, cryptographically secure web where humans own their cognition and their data.

# The Outward Spiral of Power

FutureSpeak.AI is building the infrastructure to shift capital, capability, and computing power away from centralized monopolies and back out across the global open-source ecosystem.

Takeaway: We are returning sovereignty to the user. Trust is not assumed—it is computed, scored, and verified.
